

# Industry leader in wine and spirits eliminates threats embedded in email by partnering with Votiro.

## About the Customer

This Wine and Spirits Distributor and Importer, with decades of experience, is well-recognized for its knack for sourcing top-tier, value-for-money wines from diverse corners of the globe.

As an importer and distributor, they play a vital role in propelling the industry's growth by unveiling distinctive wines to consumers and offering first-rate customer service to a wide range of clients, including merchants, wholesalers, and distributors. The company's strength lies in its people, with a workforce of ~150 personnel, including a backend team, administration, and sales professionals.

## The Challenges

**ONE** | As the Company maintained a simple IT infrastructure, a major challenge lay in securing their email system against phishing and spoofing attacks. This led them to look for a more robust solution that didn't rely on a large team to maintain.

**TWO** | In addition to being an Office 365 customer, the Company leveraged Azure Cloud for its inventory management. However, this didn't offer the level of security the Company required when doing business.

**THREE** | Although they had an Advanced Threat Protection (ATP) system in place, the Company was exploring Multi-Factor Authentication (MFA) to bolster its defenses. This would provide an additional layer of security to help protect against unauthorized access to their systems and data.

## Before and After Implementing Votiro Cloud

### Before Votiro

- **International Operations.** Exposed to international threats through doing business with global organizations, many of which may not prioritize security.
- **Complex Manual Processes.** Stopping phishing and other email-based threats was time-consuming.
- **Lack of Automation.** The current solutions did not provide automated protection, thus requiring proactive actions to ensure effective defense mechanisms.

### After Votiro

- **Disarm.** Votiro disarms all content, eliminating hidden, zero-day malware threats from the content without user actions.
- **Mature Security Process.** Integration of Votiro with existing IT and growing security stack creates a more robust security posture.
- **Rapid Onboarding.** Rather than investing resources in a complex installation and configuration, Votiro was rapidly configured and provided security.
- **Without disruption.** Simple installation, configuration, and seamless integration help the Company continue to focus on delivering high-quality spirits rather than security operations.

## Try Votiro Free for 30 Days

See firsthand how our Zero Trust approach can protect your organization from file-borne threats.

# Industry leader in wine and spirits eliminates threats embedded in email by partnering with Votiro.

## The Solution — Votiro Cloud

To bolster its security measures and ensure a threat-free digital environment, the Company integrated Votiro Cloud. This system was configured to monitor and protect their email communications and Office 365 workspace.

Votiro Cloud is known for its advanced threat detection and neutralization capabilities, making it an ideal solution for dealing with potential hidden threats. By applying this tool to their email system, the Company aimed to create a barrier against harmful elements such as malware or phishing attempts that could compromise sensitive information.

### Rapid Onboarding with O365

The API was also tailored for the Company's Office 365 environment. In the face of growing cyber threats, having a secure workspace is paramount.

With the implementation of Votiro Cloud, the Company now has an additional layer of security that thoroughly scans and filters every file that enters the O365 ecosystem, ensuring they are free from hidden malicious elements.

### Seamless Integration with Growing Security Stack

A standout feature of Votiro is its ability to enhance and complement an organization's current and expanding security infrastructure. As the client explored integrating new tools such as ATP and Cisco Umbrella into their security stack, Votiro demonstrated its interoperability in this evolving environment. Instead of supplanting existing systems, Votiro seamlessly supplements and strengthens their protection, providing an added layer of security. This ensures a well-rounded defense mechanism that optimally utilizes all tools at the client's disposal.

### Breadth of Protection for 150+ File Types

Votiro Cloud can sanitize more than 150 types of files, also providing the Company with the breadth of sanitization needed for the various traversing of their organization.

**By choosing Votiro, the Company allowed staff to focus on finding the finest spirits without being concerned about hidden threats.**

## Take a Quick Demo
