

Gain Insights into Users' Web Browsing and Email Activity

Menlo Security Insights provides detailed analytics that allow security teams and other stakeholders to quickly identify, respond to, and mitigate risks to the organization.

Benefits:

- Gain context into security threats and events
- Better understand user behavior to mitigate future risks
- Keep stakeholders informed of security posture with easy-to-consume reports

Protecting the enterprise from today's cybersecurity threats requires deep insights and context into existing threats and vulnerabilities, as well as user web and email behavior. Security analysts and threat detection and response teams need to know exactly what users were doing at the moment an attack occurred. However, today's enterprise security teams are too understaffed and underresourced to adequately take on today's increasingly sophisticated threats. Logs and traditional security information and event management (SIEM) solutions don't provide proper context into what the user was doing just prior to an event, making it difficult to diagnose the threat.

Menlo Insights

The Menlo Security Cloud Platform helps enterprises achieve Secure Cloud Transformation and offers dedicated monitoring and forensics capabilities that can analyze users' web browsing and email activity, allowing security teams to quickly identify, respond to, and mitigate risks. Rather than rely on traditional general-purpose log management platforms or SIEM solutions, security and forensics teams are able to use the Menlo Security data management and reporting platform to deliver deep insights into both user activity and protection delivered to customers. Menlo Insights was designed to interpret logs from the Menlo Security Cloud Platform and provide ready-to-use actionable data and reports. Reporting and analytics are critical to successful Secure Cloud Transformation

Clearly understand the risks to your organization: Access detailed and granular logs of user web transaction and email activity so you can take steps to mitigate vulnerabilities.

Explore and filter data: Easily read, analyze, and share raw data through visual charts, CSV format exports, and seamless integration with existing solutions.

Gain insights to keep the organization safe: Includes more than 60 predefined, commonly used queries, in addition to the ability to customize with MQL.

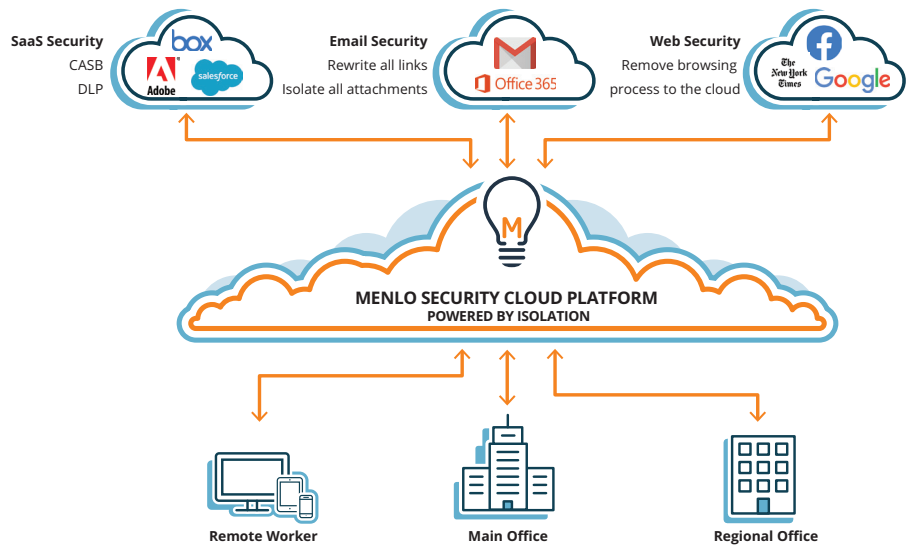

Security and forensics teams are able to use the Menlo Security data management and reporting platform to deliver deep insights into both user activity and protection delivered to customers.

Better understand user behavior and how it contributes to risk: Seamlessly query event logs and display threats detected by existing AV tools (VirusTotal, SophosAV, Sophos Sandbox, and Reversing Labs) and threats found in URLs that contain risky, badly formed, or phishing references.

Keep stakeholders informed: Rich reporting includes daily, weekly, or monthly automatic reports, or you can create custom reports by selecting multiple queries.

Secure Cloud Transformation

Stay on Top of Your Security Posture

Menlo Insights reports allow you to monitor and report on the effectiveness of the Menlo Security Cloud Platform in terms of threats mitigated and web activity, and to identify risky users and websites before taking appropriate remediation actions. These actions can include limiting or blocking access to sites through policies, rendering websites and login sites in read-only mode, or exporting event logs to a SIEM solution for broader correlation with events collected from other enterprise security tools.

About Menlo Security

Menlo Security protects organizations from cyberattacks by eliminating the threat of malware from the web, documents, and email. Menlo Security has helped hundreds of Global 2000 companies and major government agencies achieve Secure Cloud Transformation. The company's Cloud Security Platform scales to provide comprehensive protection across enterprises of any size, without requiring endpoint software or impacting the end-user experience. The company was named a Visionary in the Gartner Magic Quadrant for the Secure Web Gateway.
