

Leading nonprofit healthcare organization has 50,000 employees across six states.

### Challenges

- Tasked with securing millions of electronic healthcare records
- Facing rapidly evolving threat landscape, complex network, and decentralized management structure

### Solution

- Menlo Security Isolation Secure Web Gateway isolates all web traffic in the cloud, cutting off malware's access to the endpoint
- Eliminates all web-based cyberattacks
- Preserves a native web browsing experience for users
- Reduces IT overhead through fewer false positives and help-desk requests

## Leading Nonprofit Healthcare Organization Isolates Medical Professionals and Staff

The healthcare nonprofit is able to guarantee 100 percent malware-free Internet access using Menlo's Isolation Secure Web Gateway.

With more than 50,000 employees across six states, a leading nonprofit healthcare organization (HCO) requires a security solution that is not only secure, but also flexible and scalable enough to accommodate healthcare professionals such as doctors and traveling nurses, as well as business partners, vendors, facilities staff, and administrative personnel.

Given the HCO's sheer number of users, the organization can't afford to rely on a cybersecurity solution that hampers productivity, increases help-desk tickets, requires additional employee training, or gives employees an excuse to evade security measures altogether. In addition, because their deployment needs to cover six states, racking, stacking, configuring, and maintaining appliances is not an option.

### Zero Trust Internet Powered by Internet Isolation

Knowing that traditional cybersecurity solutions that rely on a detect-and-respond approach are not suited to preventing today's sophisticated threats, the HCO implemented a proactive approach based on Internet isolation to protect users from web-based attacks. The Menlo Security Internet Isolation Cloud enables a Zero Trust Internet delivered via Menlo's Secure Web Gateway. The Menlo Security Internet Isolation Cloud assumes that all web content is

*The Menlo Security Internet Isolation Cloud gives the IT security team at the HCO peace of mind that all users are 100 percent protected from web-based threats.*

risky. Instead of making a “good” versus “bad” determination about individual websites and content, Menlo opens all content in a disposable virtual container in the cloud, enabling users to safely interact with websites, links, and documents online without compromising security.

The Menlo Security Isolation Secure Web Gateway was ideal in this situation because it is 100 percent effective, eliminates the need for client software, deploys within minutes, and can easily scale to provide comprehensive protection across organizations of any size, worldwide, without impacting users’ native browsing experience. Delivering Internet isolation through a secure web gateway also allowed the HCO to continue to use existing cybersecurity tools such as web filtering, anti-virus, and anti-malware solutions—adding an extra layer of defense to an already robust security posture.

## 100 Percent Malware-Free Browsing with a Native User Experience

The Menlo Security Internet Isolation Cloud gives the IT security team at the HCO peace of mind that all users are 100 percent protected from web-based threats, while ensuring that users have access to the tools and information on the Internet that they need to do their jobs. During the relatively quick rollout, the HCO’s IT staff received positive feedback from users and no complaints. Even the IT administrators who were using the products remarked that they often forgot their web sessions were being isolated. Menlo makes sure that functions such as scrolling, copy and paste, right-click menus, streaming videos, and printing are all accessed the way they always have been, and work the way they should.

Most importantly, Menlo Security Internet Isolation has eliminated malware infections from uncategorized websites, and drastically reduced the probability that a breach will compromise the organization’s electronic health records. In addition to peace of mind, the HCO estimates that this solution will result in material savings in both dollars and staff costs for remediating infected endpoints and processing site categorization requests.

## About Menlo Security

Menlo Security protects organizations from cyberattacks by eliminating the threat of malware from the web, documents, and email. Menlo Security has helped hundreds of Global 2000 companies and major government agencies achieve Zero Trust Internet. The company’s cloud-based Internet Isolation Platform scales to provide comprehensive protection across enterprises of any size, without requiring endpoint software or impacting the end-user experience. The company was named a Visionary in the Gartner Magic Quadrant for the Secure Web Gateway.
