

Your Data Security Solution

Grappling with outdated technology, an overburdened IT team, or unsure how you'll be compliant come audit time?

We have you covered. Our Zero Trust approach to data security prevents privacy exposures (PII, PHI, PCI) **and** malware threats (ransomware, zero days) in real-time, allowing sensitive data to **flow freely** and **safely** into and throughout your organization.

Here's how we do it:

Data Masking

- Sensitive data is identified and anonymized while in-motion
- Unstructured *and* structured data is monitored for risks
- Compliance is made easy for strict regulations like PCI-DSS
- Per-company policy controls keep IT in control of their data

Threat Prevention

- Files and their objects are cleansed of hidden malware
- Productivity continues freely with hands-free mitigation
- Customer and vendor uploads are cleansed of hidden threats
- Sanitization is just milliseconds, while delivering full file fidelity

Plus, Votiro provides in-depth, actionable privacy and threat analytics to keep you informed and prepared for the future.
